# Summary of Experimental Facilities Session

- Experimental facilities
  - Focus on ‘discovery’
  - Empirical approaches need end-users
- New suggestions
  - Using experimental facilities infrastructure as a trust testbed to explore (for example) how policy management scales in open & federated systems etc.
  - Extending testbeds to monitor end user behaviour in trust / privacy context

# Beyond FIA Stockholm

- In addition to the topics covered by the speakers, the following issues were raised potentially for FIA Valencia
  - Trust in large scale autonomic systems (first mentioned by Aljosa Pasic)
    - Action: Check with Mana to see if covering.
  - Security and Privacy through to the network levels (first mentioned by Caspar Bowden)
    - Action: Check with PrimeLife etc.
  - User centered design and usability (Caspar Bowden)
    - to some extent already covered in *How to Measure Trust* session.
  - Data management and storage aspects (Neeraj Suri)
  - Looking at Trust and Security of application areas (Kai Rannenber)

# Actions and wrap up

- ID session
  - Follow up with wiki site for airing two views on ID (networks and services) motivations, approaches, technical descriptions, pros, cons, ...
  - Suggestion for FIA Stockholm session to be enable both views presented and discussed with a moderator;
  - Two or more speakers already identified but follow up required after workshop.
- How to measure trust session
  - A number of good topics were raised during the workshop and these will be followed up after
  - A number of speakers also identified and will be firmed up in a few days.
- Input from speakers and discussion sessions will be addressed in T&I Plenary and scheduled for future FIA events
- Special thanks to speakers and participants from Research communities and European Commission and especially for support of Yves Paindaveine to the caretakers.
